

Large retailer cuts  
\$67,000 from its  
bottom line each year

### Sensi Multiple Thermostat Manager saves time, money and energy

When it comes to heating and cooling costs for retail locations, launching Sensi Multiple Thermostat Manager is an easy way to improve efficiencies across an organization to support scalability and growth.

Express Stores found that their employees were manually adjusting thermostats to temperatures outside of recommended limits—often setting temperatures too low in the summer and too high in the winter. Not only did this contribute to higher energy bills, but HVAC units were breaking down more frequently. With the install of Sensi MTM, Express Stores has experienced a direct correlation to a reduction in IT tickets for HVAC support including service calls and repairs.

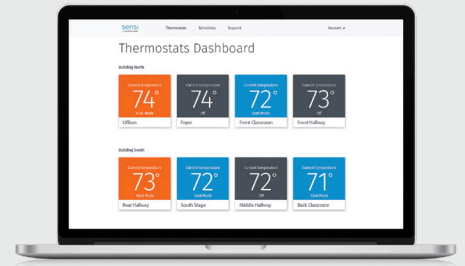

The stores still have the ability to make manual adjustments to their thermostats to keep employees and customers comfortable, but the range of the adjustments is limited. The ranges prevent unnecessary abuse of HVAC equipment.

Sensi Multiple Thermostat Manager is a cloud-based, light commercial building management solution that allows a building manager to remotely access, group, lock and schedule all of the thermostats from anywhere. This also eliminates costly trips to each location to adjust and monitor thermostat usage.

“From a cost perspective, Sensi fit into our budget and met all our needs” says, Dave Tompkins, Senior Director of IT Facilities for Express Stores. “Our end goal was \$1 a day in energy savings and we’re pretty close to it. Not to mention we’ve seen a decrease in the number of HVAC units that needed to be replaced because excessive tampering with thermostats is not contributing to the abuse and overuse of our heating and cooling systems.”

# Simplify and centralize

Now you can manage your facility's energy usage through one central dashboard. With Sensi Multiple Thermostat Manager, control the comfort of every room at your fingertips.

## Group scheduling with batch operations

Easily consolidate and customize settings across multiple thermostats by grouping and sorting.

## Temperature limits

Provide a range of temperatures to end users to prevent misuse of the HVAC system.

## Quick schedule creation

Create and adjust schedules for single or groups of thermostats from anywhere.

## Custom keypad lockout

Maintain total control of each thermostat by selecting which buttons are locked or unlocked.
