

Sensi™ Touch 2 Smart Thermostat

With Multiple Room Sensor Capability

Business and Product Overview

Introduction

The Sensi™ Touch 2 smart thermostat is the next evolution of smart thermostats by Emerson.

With a modern new design, glass LCD touchscreen, enhanced user experience and room sensor compatibility this thermostat proves why Sensi smart thermostats are top rated by consumers.

What makes Sensi different

Easy to Install, Easy to Use

- #1 Rated smart thermostat mobile app
- Compatible with majority of home HVAC systems
- Wire Picker tool

Our Privacy Promise to Customers

- Sensi DOES NOT SELL your personal information
- Sensi DOES NOT UTILIZE your thermostat activity data for other targeting/advertising purposes

PRIVACY PROTECTION: For full details, review the Sensi Privacy Policy at <https://sensi.emerson.com/en-us/legal>. Why Sensi?

SUPER EASY!

Super easy to install! Took me literally 10 minutes!!! I just needed a basic on/off unit. I watched a video with suggestions to take a picture of the wires and label. Works just fabulous!

How did we live without it!

Got this for our home. So happy we did. We can control it from two phones, and our Alexa. So great. Before we arrive home, we can turn the heat up so we arrive home to a warm house!

Sensi Touch 2 Smart Thermostat

New Features

- Top-rated design and the industry's thinnest smart thermostat
- Works with Sensi Room Sensors
- Simplified install with added Bluetooth technology
- Sub-GHz technology doubles the range for room sensors over standard Bluetooth
- Two new accessory terminals for dedicated humidifier control

Sensi Touch 2 Smart Thermostat Features

 **EASY TO INSTALL & CONNECT**
Features easy-click terminals, in-app instructions and accepts up to 15 optional wireless room temperature and humidity sensors.

 **CONTRACTOR MODE**
Use Contractor Mode to scan the barcode on any Sensi thermostat and register it to your company. No Wi-Fi required at installation.

 **CONTRACTOR-ON-CALL**
Become a Sensi Partner and be the contractor on call in customers's monthly usage reports, service reminders, smart alerts and in-app. Register at sensiregistration.com.

 **SMART MAINTENANCE**
Monitor the performance and efficiency of your HVAC system with important service alerts regarding your equipment and ongoing maintenance reminders such as when to replace your air filter.

 **HUMIDITY CONTROL**
Help homeowners stay comfortable with humidification/dehumidification control.

 **ENERGY SAVINGS**
Save about 23% on HVAC energy through features like flexible scheduling, remote access and usage reports.¹

 **USAGE REPORTS**
Monitor current day and historical heating, cooling and fan runtimes right in the app.

 **CIRCULATING FAN**
Select a minimum daily fan run time percent to help regulate temperature and improve indoor air quality.

 **KEYPAD LOCKOUT & TEMPERATURE LIMITS**
Maintain total control by setting temperature limits and disabling changes by others at the thermostat.

 **SMART HOME COMPATIBLE**
Works with Amazon Alexa, Google Assistant and Samsung SmartThings smart home platforms.

Energy Star and Title 24 Compliant

Sensi Partner Program Get access to program benefits including homeowner leads, contractor branding, custom literature and free online training. Learn more at emerson.com/sensipartner.

¹ ENERGY SAVINGS: Calculated by comparing operation time for a nationwide sample of Sensi users with temperature adjustments averaging 4° in comparison to users with no adjustments. Savings vary based on equipment type/condition, insulation, climate & temperature adjustment size/frequency.

Sensi Room Sensors

Compatible with Sensi Touch 2

Sensi room sensors are designed to remotely monitor temperature and humidity in different rooms when paired with the Sensi Touch 2 smart thermostat.

Prioritize Room Temperature

Select the sensor in the room that matters most to you and let the thermostat control it to whatever setting you want.

Balanced Comfort

Average your temperature settings across both your thermostat and sensors, helping to manage hot and cold spots throughout your house.

Sensi Partner Program Overview: Benefits

Use Contractor Mode to automatically add your digital branding to every Sensi Touch 2 smart thermostat you install, keeping you top of mind when a customer needs maintenance or service. Your branding will also be on monthly usage report, service alerts, mobile app and service reminders.

EASY steps to Register a Thermostat:

1. Download the Sensi App and sign into your Sensi account.
 Press and hold the Sensi logo at the top of the app dashboard for five seconds. If you don't already have a Sensi Partner Program account, tap **Become a Sensi Partner**. If you already have an account, tap **OK**.
2. Tap **Contractor Mode** at the top of the dashboard.
The first time you use Contractor Mode, the Sensi app needs to find your company information that you supplied when you registered at SensiRegistration.com. Enter the phone number used to register to proceed.
3. Select **Register a Thermostat** and scan the code on the back of the thermostat.

That's it! You can register additional thermostats or select **Back** to return to the **Contractor Mode** menu.

Configuration Options Summary

Menu Item	Description	Configuration Options
Outdoor Equipment	Select AC or Heat Pump equipment, as well as the number of stages. Set this to AC1 for single stage systems or HP1 or HP2 for single or multi-stage heat pumps	AC1/AC2/HP1/HP2/None
Indoor Equipment	Select whether the equipment is an electric or gas furnace, or fan only. Set this to EL1 for single stage electric or GA1 or GA2 for single or multi-stage gas systems.	GA1/GA2/EL1/EL2/Fan
Reversing Valve Position	When configured for O, reversing valve is energized in Cooling. This will cover most applications. Some manufacturers such as Rheem or Rudd use the B terminal, which would energize in heating. For three-wire zone hydronic systems set this to 6.	O/B/6/None
Additional Accessories		
Humidifier (wired to thermostat)	If a humidifier is wired to the thermostat, change the Humidifier setting to YES	Yes/No
Dehumidifier (wired to thermostat)	If a dehumidifier is wired to the thermostat, change the Dehumidifier setting to YES.	Yes/No

Configuration Options in App

Feature	Description
Remote Access	Adjust, control, schedule or monitor from anywhere, anytime
Usage Reports	Monitor current day and historical heating, cooling and fan run times
Contractor-On-Call	Contact your HVAC Pro when you need service
Dashboard	View and control multiple thermostats
Geofencing	Switches settings between Home or Away based on your location
Program a Schedule	Create one, or multiple time/temperature setting schedules
Keypad Lockout	Lock out changes at the thermostat but retain Wi-Fi control
Temperature Limits	Allow thermostat adjustment only within the temperature range you select
Automatic Heat/Cool Changeover	Allows selection of the temperature range for automatic changeover between heat/cool
Boost	Allow fast staging when the temperature is adjusted 3 or more degrees
A/C Protection	Five minute time delay between cooling or heat pump cycles
Adjustable Cycle Rate	Allows fast, medium or slow cycle rates
Temperature and Humidity Offset	Adjust temperature display +/- 5°, humidity display +/- 25%
Circulating Fan	Select daily fan run time percentage even if heat or cool is not running
Maintenance Reminder	Calendar Date or Usage (runtime)
Air Filter Reminder	Calendar Date or Usage (runtime)
UV Bulb Reminder	Calendar Date or Usage (runtime)
Optional Remote Temperature/Humidity Sensors	Add as many as 15 remote temperature/humidity sensors to provide an average building temperature for the thermostat to control to or add sensors to monitor temp and humidity in select locations

1 Wire Accessory Control Wiring Example

ACC+ and ACC- can be configured to control a low voltage humidifier circuit and offers the choice of 1 or 2 wire control.

1 Wire Control

On a call for Humidification the thermostat sends 24V power out on terminal ACC+ by closing an internal switch between the thermostat terminals RC and ACC+.

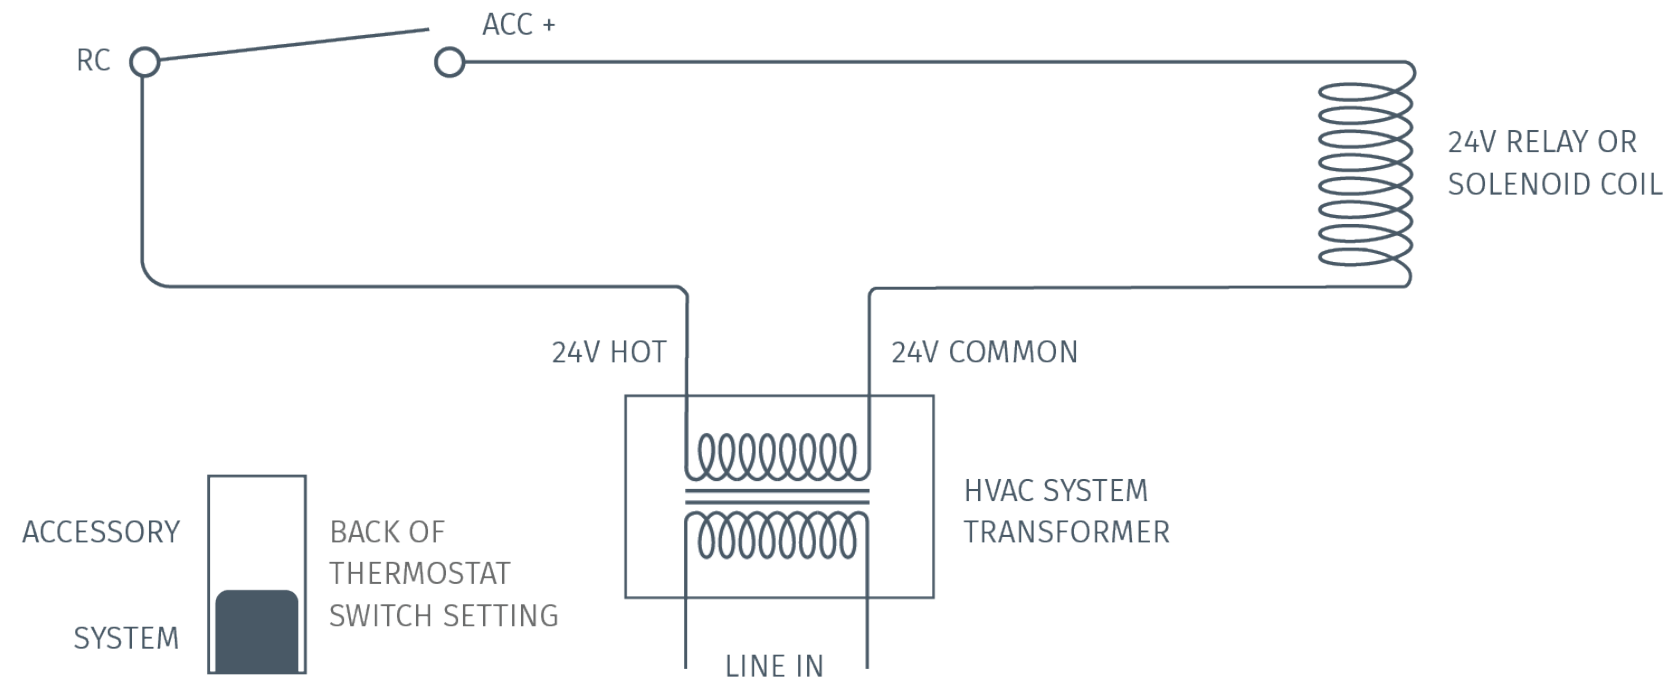

When set for 1 wire control the other ACC terminal (ACC-) is isolated and not used.

For 1 wire control set the switch on the back of the thermostat to "System" and use the installer menu to select Humidifier (Yes).

TECH TIP: 1 wire control is typically used to energize one side of a solenoid coil that already has the other side of a relay or solenoid coil attached to the common on the 24 VAC HVAC transformer.

1 Wire Accessory

2 Wire Accessory Control Wiring Example

2 Wire Control

On a call for Humidification the thermostat closes a set of low voltage dry contacts between ACC+ and ACC-. Low voltage power from the humidifier transformer is to be applied to ACC- and on call for humidification switches back out on ACC+ to energize a solenoid or other device.

For 2 wire control set the switch on the back of the thermostat to "Accessory" and use the installer menu to select either Humidifier (Yes).

2 Wire Accessory

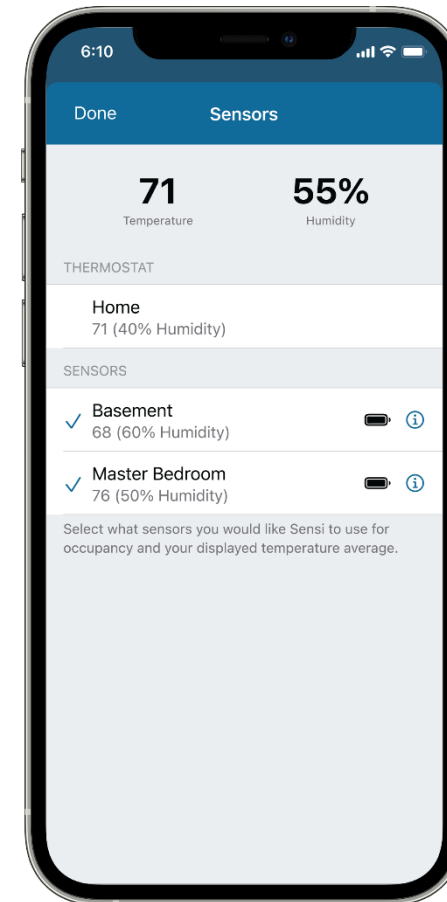

TECH TIP: 2 wire control is typically used on systems where the accessory Humidifier has its own built-in transformer and is not powered by the HVAC transformer connected to the thermostat. ACC+ and ACC- provide low voltage humidistat switch contacts that close on call for humidification.

Sensor Connection/Averaging vs Monitoring

Room sensors in the app with a check mark beside them send their room temperature/humidity data to the thermostat for averaging with the other checked sensors and the onboard thermostat sensor.

The thermostat then cycles heat or cool to control the average sensed temperature to the thermostat setting.

The thermostat does not use room temperature/humidity data for averaging from remote sensors without a check mark but the app does allow you to see the temperature in unchecked sensor locations which is handy for monitoring.

TECH TIP: If you are hot or cold in an area with a sensor nearby you can easily turn off the other sensors in the app so the thermostat controls the setpoint to the sensor temperature sensor in your location.

Staging

Sensi multi-stage thermostats are equipped with a microprocessor that uses an algorithm to make decisions about bringing on an additional stage of heat or cool. The algorithm focuses on system performance, rather than only time or temperature, to determine when to engage 2nd stage.

More frequent calls, when the temperature exceeds the first stage differential, increasingly drive faster engagement of 2nd stage. Less frequent time outside the differential will delay calls for additional stages.

This is accomplished by microprocessor capture of the rolling average of room temperature, allowing the optimum staging point in time to be calculated.

Faster calls for 2nd stage, result in a quicker trigger for 2nd stage.

Slower calls for 2nd stage, result in slower trigger.

Dual Fuel

Dual Fuel systems combine a heat pump and gas furnace.

The Sensi Dual Fuel logic option allow the staging algorithm to determine the optimum time to stage to gas. They also allow the furnace time to complete the ignition sequence before switching off the pump to prevent cold air from being blown out the vents.

This algorithm doesn't require an outdoor sensor because it tracks and monitors system performance, and then determines the optimal time to stage to the gas furnace.

Connecting to Wi-Fi

1. Have the customer download the Sensi App and sign in. If they don't have an account one can be created on the sign-in screen. Tap **+** in top left corner, tap **Sensi Touch 2 smart thermostat** then tap **Connect to Wi-Fi**
2. On the thermostat, tap **Menu** in the top left corner, then **Wi-Fi**. Tap **Connect**. Make sure Bluetooth is turned on in phone settings.
3. Using the app, **scan the QR code** on the Sensi Touch 2 screen to connect through Bluetooth technology. This will require Bluetooth permissions on your phone. If you're having trouble scanning, tap "DISPLAY PIN" to manually enter the code in the app.
4. Select the Wi-Fi Network and enter Wi-Fi password as prompted.
5. Finally, they will be prompted to name and register their thermostat

TECH TIP: Sensi is only compatible with 2.4GHz networks. If your network does not show up in the list, it is either hidden or not compatible with Sensi.

Turn on Geofencing

- Saves energy when you are away by adjusting 3° lower heat or higher cool based on your phone, or multiple phone locations
- 3° setback happens automatically when geofenced phones are 3 or more miles away.
- Just Tap Scheduling, then Geofencing.

EXAMPLE: Joe and Jane live in a condo. Joe turns on geofencing. Now when Joe leaves the thermostat sets back 3 degrees. If Jane turns on geofencing in her phone, set back will not happen until both Joe and Jane leave the home.

Create Schedules

The Sensi app is easy for people with a fixed schedule to use with a simple step-by-step format to:

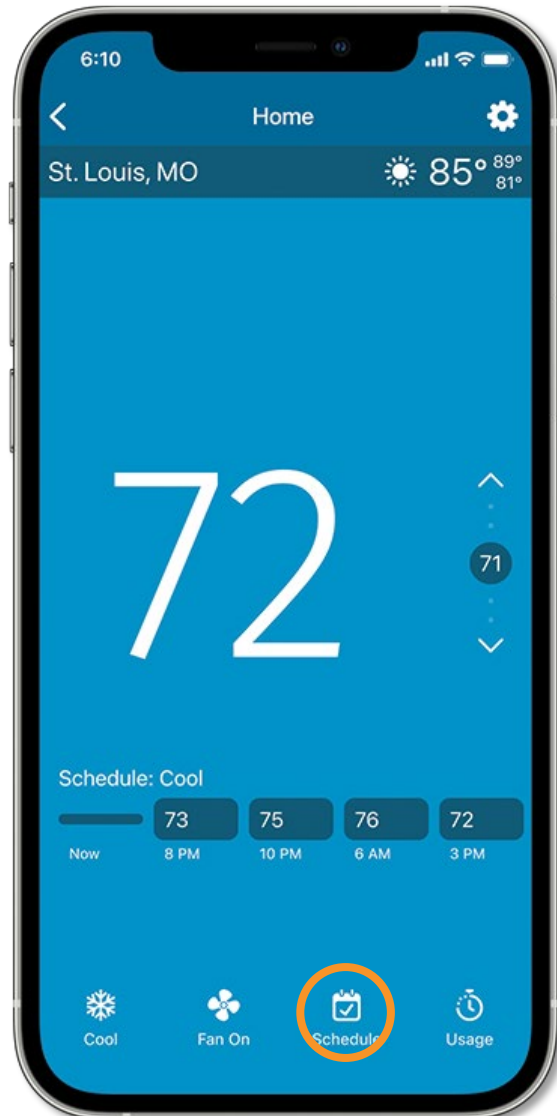

- Use the factory pre-programmed schedule
- Create custom heat/cool schedules
- Copy, customize and store multiple schedules
- Override, change or cancel schedules

Within five minutes the thermostat should make a soft click sound and “Heating” should appear on display. This sound indicates the thermostat is operating properly. If the thermostat does not click, try resetting the thermostat. If the thermostat does not click after being reset, contact your heating and cooling service person or place of purchase for a replacement. If the thermostat clicks, verify the heating system is operating correctly.
