

King Kold chooses Copeland's condensing units for supermarket installation

Client background

With over 17 years in the cooling industry, King Kold is one of Zimbabwe's leading experts on cooling solutions. They offer customized designed installations, preventative maintenance, and other services for domestic or commercial customers.

The challenge

King Kold customers' scale of operations require best-in-class solutions that guarantee reliability, efficiency and highest levels of comfort. King Kold's challenge was finding solutions that grant their customers all that, and most importantly, solutions that offer easy installation and round-the-clock support.

Our solution

The ZX condensing units from Copeland are equipped with Intelligent Store Solutions – Allowing the most innovative approach to enterprise facility management through integrating hardware and services and providing a comprehensive understanding of costs, operations and maintenance needs.

The advanced electronics controller, leading to improved speed and accuracy of system diagnostics, protection against over-current, overheating, incorrect phase rotation, compressor cycling, high pressure resets and low-pressure cut-outs makes the ZX range of condensing units the best choice for achieving energy efficiency and reliability.

Results summary

The units will guarantee optimum performance and reliability, coupled with reduced energy consumption and downtimes.

Energy efficiency

Reliability

“

As a contractor we really enjoy the working with Copeland's range of ZX condenser unit. Over the years we have fitted many and have found them to be reliable, cost friendly in this price sensitive environment, as well as easy to maintain and repair when something does happen thanks to the self-diagnostics built into the machines.
