

Copeland Scroll™ Compressors for Air Conditioning Applications

COPELAND™

Pioneering Technologies for best in class products

Emerson commercial & residential solutions is the world's leading provider of heating, ventilation, air conditioning and refrigeration solutions for residential, commercial and industrial applications, supporting the industry with advanced technology, technical support and training services.

For more than 80 years, we have been introducing innovative technology to the market, from the first semi-hermetic and hermetic compressors in the 1940s and 1950s, the high efficiency Discus™ semi-hermetic, air conditioning and heating scroll compressors in the 1980s and 1990s, to the new Stream semi-hermetic and the digital scroll compressor technology of today.

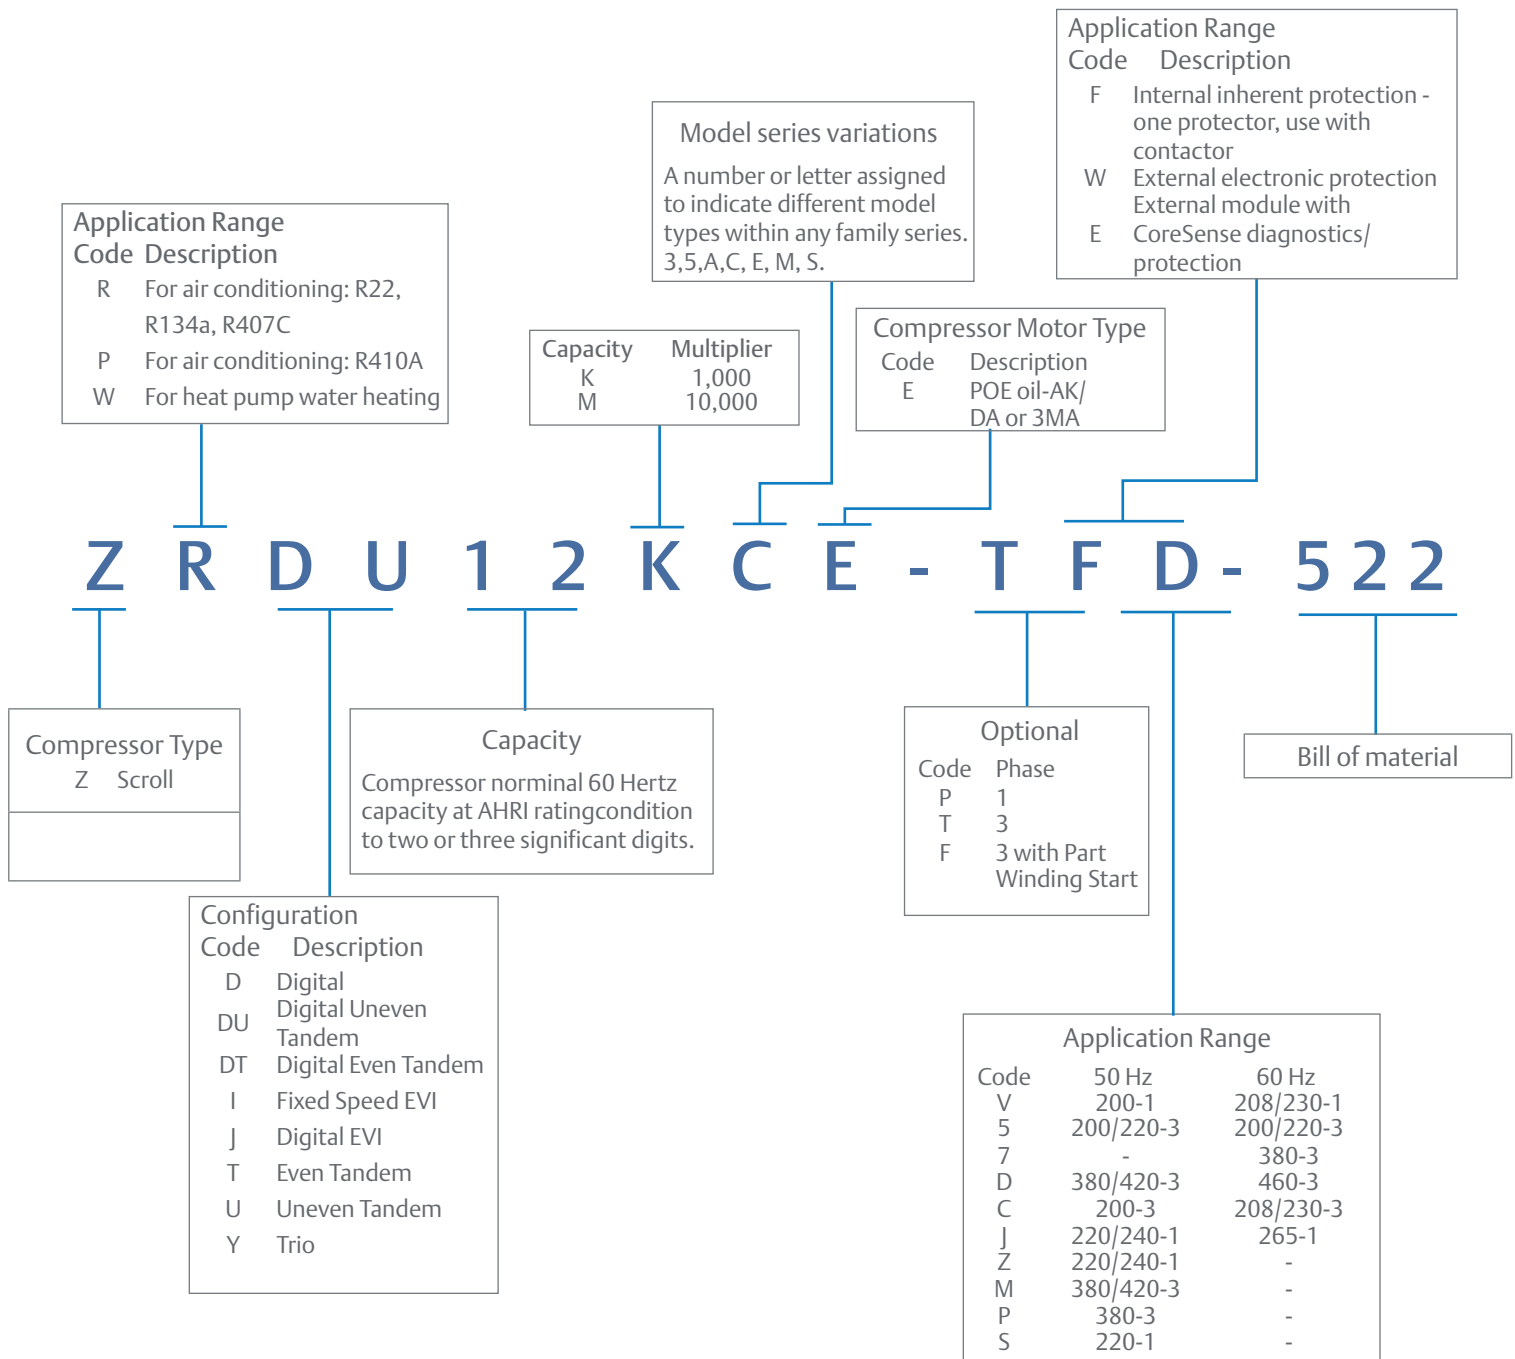

Based on this, we have developed an unequalled range of solutions for the refrigeration and air conditioning markets. In recent years, we have become a major solution provider to the air conditioning and refrigeration industry. Our range of Copeland™ brand products addresses the diverse needs of all of these markets. With scrolls and semi-hermetic compressors available for all main refrigerants, equipped with smart electronics and capable of modulation, Emerson has taken compressor technology to new heights.

Nomenclature

General information

Technical data are correct at the time of printing. Updates may occur, and should you need confirmation of a specific value, please contact Emerson clearly stating the information required.

Emerson cannot be held responsible for errors in capacities, dimensions, etc., stated herein. Products, specifications and data in this literature are subject to change without notice.

The information given herein is based on data and tests which Emerson believes to be reliable and which are in accordance with today's technical knowledge. It is intended for use by persons having the appropriate technical knowledge and skill, at their own discretion and risk. Our products are designed and adapted for fixed locations. For mobile applications, failures may occur.

The suitability for this has to be assured from the plant manufacturer, which may include making appropriate tests.

Note:

The components listed in this catalogue are not released for use with caustic, poisonous or flammable substances. Emerson cannot be held responsible for any damage caused by using these substances.

About Emerson

Emerson (NYSE: EMR), headquartered in St. Louis, Missouri (USA), is a global technology and engineering company providing innovative solutions for customers in industrial, commercial, and residential markets. Our Emerson Automation Solutions business helps process, hybrid, and discrete manufacturers maximize production, protect personnel and the environment while optimizing their energy and operating costs. Our Emerson Commercial and Residential Solutions business helps ensure human comfort and health, protect food quality and safety, advance energy efficiency, and create sustainable infrastructure. For more information visit [Emerson.com](https://www.emerson.com).

Copeland Scroll™ Compressors

for R22, R407C and R134a refrigerant

Copeland Scroll™ compressors for R22, R407C and R134a refrigerants are widely used in air conditioning, process cooling and precision cooling applications.

Applied in the air conditioning industry in diverse applications including split systems, rooftops, packaged units and chillers, scroll compressors are now the most used compression technology replacing reciprocating and screw compressors due to its undeniable superiority. Several, fully Copeland™ qualified, multiple compressor assemblies (tandem and trio) are available to be used in large capacity systems to deliver optimal comfort, low operating cost with higher seasonal efficiency.

The range of products goes from ZR18 (1.5HP) to ZR380 (30HP) in single compressor applications and to 60/90 HP in Tandem/trio applications in single module.

Features and Benefits

- Copeland Scroll™ axial and radial compliance for superior reliability and efficiency
- Wide scroll line-up
- Low oil circulation rate
- Superior liquid handling capability
- Low sound and vibration level
- Low Life Cycle Climate Performance (LCCP)
- Copeland™ qualified tandem and trio configurations for superior seasonal efficiency

Efficiency

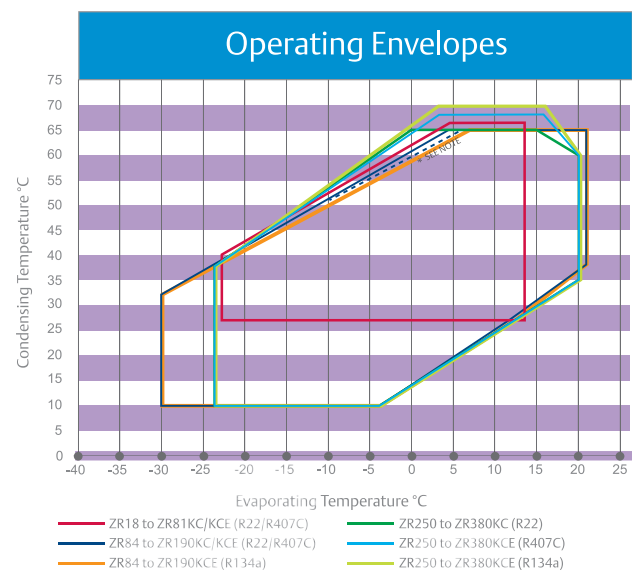

Reliability

Low Life Cycle Cost

Maximum Allowable Pressure (PS)

- ZR18 to ZR81:
Low Side PS 20 bar(g) / High Side PS 29.5 bar(g)
- ZR84 to ZR380:
Low Side PS 20 bar(g) / High Side PS 32 bar(g)

Copeland Scroll™ Compressors for R410A refrigerant

Copeland Scroll™ compressors are perfectly suitable for split systems, rooftops, packaged units and chiller applications.

Copeland Scroll compressors offer an advantage of fewer moving parts with scroll sets wearing in. Meanwhile, both axial and radial compliance allows the scroll compressor to be more tolerant of liquid refrigerant and debris thus enhancing reliability. Furthermore, Emerson's well established expertise in paralleling multiple compressors to one efficient solution provides a unique advantage and an assured benefit even for the manufacturing of large capacity systems (air cooled and water cooled chillers).

The broad range of products goes from ZP14 (1.2HP) to ZP725 (60HP) in single compressor applications and to 120/180 HP in Tandem/trio applications in single module.

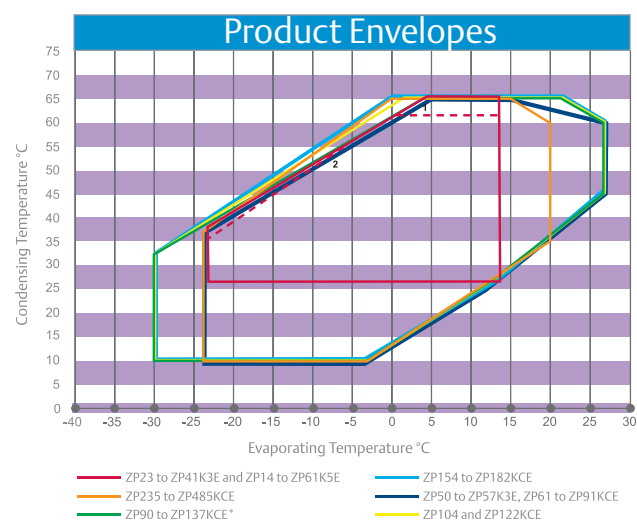

Features and Benefits

- Copeland™ qualified tandem and trio configurations for superior seasonal efficiency
- Copeland Scroll axial and radial compliance for superior reliability and efficiency
- Low Life Cycle Climate Performance (LCCP)
- Wide scroll line-up in R410A
- Low sound and vibration level
- Low oil circulation rate
- Extended 5K suction superheat operating envelope suitable for heat pump applications - Contact Application Engineering for more information

Maximum Allowable Pressure (PS)

- ZP14 to ZP91:
Low Side PS 28 bar(g) / High Side PS 43 bar(g)
- ZP90 to ZP485:
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

Notes:
Dashed Red Line 1 Indicates 63 °C Condensing Limit For ZP51 To ZP61K5E - PFV For -5% Voltage Tolerance
Dashed Red Line 2 Indicates The Limit Of Operation With Constant Return Gas Temperature of 35 °C
* Does Not Include ZP91, ZP104, ZP122KCE

Copeland Scroll Digital Compressors for R22, R407C and R410A refrigerant

Copeland Scroll Digital™ Compressors offer stepless capacity modulation in air conditioning applications and a flexible solution for R22, R407C and R410A refrigerant.

In many cooling and heating systems, load and operating conditions vary over a wide range, thus, requiring the use of capacity modulation. The Digital Scroll™ is a simple compressor solution able to assure stepless modulation down to 10% of the nominal capacity allowing for precise temperature and humidity control, superior comfort and energy saving.

This compressor range is the preferred choice for VRF, rooftop, chilled water and process cooling applications.

Features and Benefits

- Wide modulation range from 10% to 100% for immediate load adjustment, precise temperature control and optimal comfort
- Energy efficient operation at part load conditions
- Copeland Scroll axial and radial compliance offers high reliability
- Fewer starts/stops
- Constant speed operation means simpler system oil return management
- Easy to install, commission and maintain - simple system architecture, no complicated electronics and no EMI/EMC problems

Efficiency

Reliability

Low Life Cycle Cost

Maximum Allowable Pressure (PS)

- Digital ZRD36 to ZRD81:
Low Side PS 20bar(g) / High Side PS 29.5 bar(g)
- Digital ZRD94 to ZRD125:
Low Side PS 20bar(g) / High Side PS 32 bar(g)
- Digital ZPD34 to ZPD91:
Low Side PS 28 bar(g) / High Side PS 43 bar(g)

The modulation mechanism of a Copeland Scroll Digital™ compressor

Compressor in loaded state operates as a standard scroll and delivers full capacity and mass flow. During the unloaded state, however, the system delivers no capacity and no mass flows through.

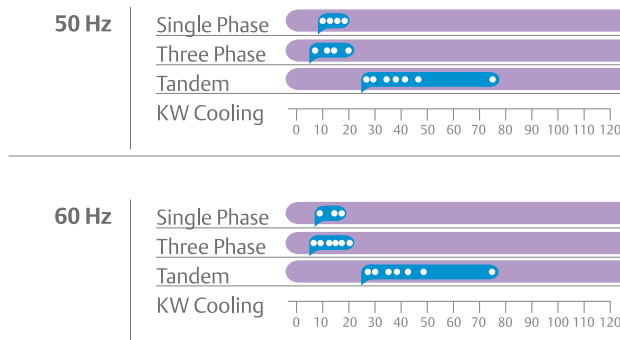

The concept of cycle time

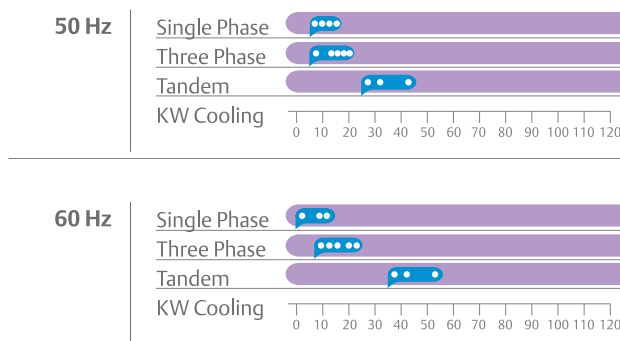

Varying the 'loaded state' and the 'unloaded state' times, any capacity between 10% and 100% can be delivered by the compressor.

All Values As Per AHRI Standards : Evaporating Temp. : 7.2°C , Condensing Temp. : 54.4°C , Subcooling : 8.3K , Superheat : 11.1K , Ambient Temp. : 35°C

Tandem/Trio assemblies by system manufacturers. Contact Application Engineering for more information.

Tandem ready compressors provide flexibility to design different module size for VRF applications.

Copeland Scroll™ Compressors with Vapor Injection Technology

Today, homes and businesses need air conditioning system that can provide sufficient cooling or heating capacity while delivering significant energy savings in whole operating range.

Copeland Scroll with Vapor injection allows air conditioning systems to deliver better performance at high ambient conditions. Vapor injection improves the cooling capacity of air conditioning systems up to 12%. This technology is also used in heating systems to improve the heating capacity up to 30% at lower ambient conditions.

The range of product goes from ZRI61 (5.1HP) to ZRI144 (12HP) for R22 refrigerant and ZPI54 (4.5HP) to ZPI90 (7.5HP) for R410A refrigerant.

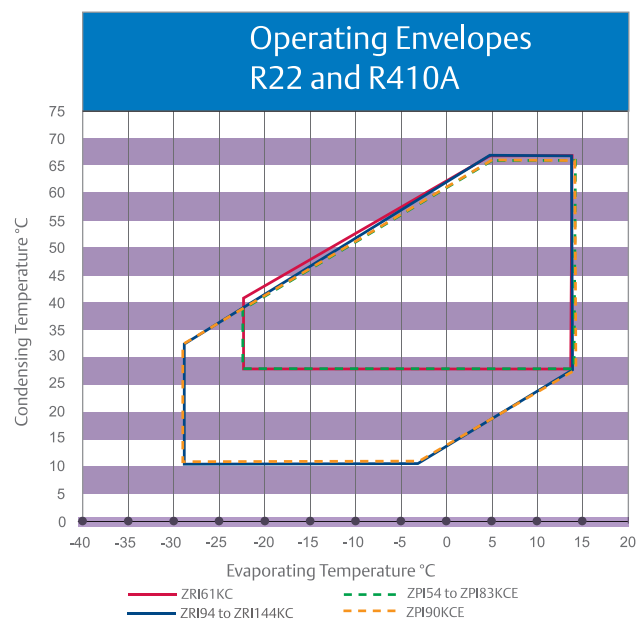

Features and Benefits

- Copeland Scroll axial and radial compliance for superior reliability and efficiency
- Wide scroll line up
- Low oil circulation rate
- Superior liquid handling capability
- Low sound and vibration level
- Low Life Cycle Climate Performance (LCCP)
- Vapor Injection Technology allows better system performance at high ambient/lower ambient conditions in AC and heating applications

Maximum Allowable Pressure (PS)

- ZRI61 to ZRI144 and Digital ZRJ61 to ZRJ72:
Low Side PS 20bar(g) / High Side PS 27.5 bar(g)
- ZPI54 to ZPI83 and Digital ZPJ61 to ZPJ83:
Low Side PS 28bar(g) / High Side PS 43 bar(g)
- ZPI90:
Low Side PS 29.5 bar(g) / High Side PS 45 bar(g)

The Concept of Vapor Injection

The vapor injection path

Vapor is injected via the vapor injection line into the compressor

Vapor injection increases system capacity by delivering low temperature liquid refrigerant to the expansion device of the main evaporator. The main liquid line is cooled by taking part of liquid flow and expanding it through the evaporator side of an economizer or subcooler. Vapor from the economizer is fed to the intermediate pockets of the scroll where it is added to the flow that has been taken into the suction from the main evaporator. Compression of injected vapor is a more efficient process since the temperature lift from saturated injection to saturated discharge temperature is less than from saturated suction to saturated discharge. The COP of a vapor injected system can therefore be improved while maintaining capacity if the compressor displacement is reduced.

Copeland Scroll™ Compressors for Heat Pump Water Heating

The Copeland Scroll™ ZW compressor provides energy efficient alternative for hot water heating and space heating to replace the use of electric heaters or fuel-fired boilers.

The combination of vapor injection technology and special scroll design enables the air source heat pump to operate at -20°C ambient condition. Compared to its predecessors, ZW provides 40% higher capacity and 22% higher COP at the same ambient condition.

The ZW compressor shows its commitment in promoting green technology by utilizing low GWP refrigerants, thereby directly and indirectly reducing CO2 emissions.

Features and Benefits

- Innovative Scroll Heating™ Technology
- High efficiency water heating solution
- 70% lower energy cost than traditional electric heater and boiler
- Whole season operation design: -20°C to about 43°C ambient temperature
- Water temperature up to 65°C
- 40% more heating capacity than traditional heat pump technology

Maximum Allowable Pressure (PS)

- ZW30KS to ZW108KS and ZW30KA to ZW61KA:
Low Side PS 20 bar(g) / High Side PS 30 bar(g)
- ZW30KSE to ZW108KSE and ZW34KAE to ZW61KAE:
Low Side PS 20 bar(g) / High Side PS 32.5 bar(g)
- ZW21KAE:
Low Side PS 20 bar(g) / High Side PS 29.5 bar(g)
- ZW108KA:
Low Side PS 20 bar(g) / High Side PS 27.5 bar(g)
- ZW108KAE:
Low Side PS 20 bar(g) / High Side PS 32 bar(g)

Copeland Scroll Compressors for Heat Pump Water Heating

The Copeland Scroll ZW is designed over Emerson Climate Technologies’ strong experience of 100 million scroll compressors and is recognized as a reliable and efficient product. On this strong base, ZW applies Scroll Heating™ technology and multiple new product design features. ZW scrolls hold additional new patent on its design.

Scroll Heating technology reliably expands the HPWH capability all the way to -20°C ambient. It also improves heating capacity by around 40% and COP by 22%.

Copeland Scroll’s efficiency is primarily derived from its axial compliance design. The axial compliance design is a pressure balanced mechanism to axially load the scroll elements—providing optimum scroll tip load and ensuring excellent tip sealing. ZW scrolls are required to operate on a much wider range of envelope compared to standard heat pump air-conditioners. This has been accomplished by a new axial compliance pressure balance combination designed specifically for ZW scrolls. It also applies highly efficient and high power motor which can cater to the extremes required by HPWH; to generate low internal losses at mild ambient cold tank heating and provide adequate power demanded at high ambient tank reheating. ZW is designed with options for R22 and HFC refrigerants R407C and R134a.

When it comes to efficiency and reliability in residential and commercial water heating applications, Copeland Scroll compressors continue to set the standard. HPWH powered by Copeland Scroll ZW compressors is a new technology in residential and commercial water heating, thereby replacing traditional water heating systems.

The Copeland Scroll ZW compressor offers additional benefits, including more energy savings and higher water temperature, in comparison to standard scroll technology. Its unique scroll and axial compliance design is configured for higher compression ratio and higher differential pressure. And because these compressors “wear in” over time instead of wearing out, industry experts can count on years of dependable performance, even under the most stringent water heating requirements. With all these benefits, the Copeland Scroll ZW compressor is definitely the most reliable solution available on the HPWH market.

ZPD61 to ZPD83	296.9 [11.96]	12.78-12.90 [0.503 - 0.508]		125.45 [4.94]	252.5 [9.94]	18.3 - 19.5 [0.73 - 0.76]	478.1-484.1 [18.83-19.05]	19.05 [0.75]	11.8 [0.46]
ZPD91		19.10 - 19.25 [0.75 - 0.76]	245.6 [9.67]	129.7 [5.1]		19.0 - 19.5 [0.75 - 0.76]		19.1 [0.75]	

Notes:

- (1) Nominal dimensions are shown. All tolerances are ± 1.50 [0.060] unless otherwise specified.
- (2) Due to the accumulated assembly tolerances, the top of the compressor, terminal box, suction and discharge fitting vary from the mounting feet by ± 3.0 [0.12]
- (3) Terminal box option is shown.
- (4) Stub tube fittings are shown.
- (5) Linear measurements in [] are inch conversions. Third Angle Projection
