

Site Supervisor

Control module

Integrated control of a building made easy

Site Supervisor is the new Copeland building controller. Site Supervisor is a complete monitoring and control system of the store. Optimized for small and medium surfaces, Site Supervisor offers a modern user interface through native web pages server. It also offers the ability to access, verify and change the settings of a plant at any time and from virtually anywhere, by virtue of the navigational support both via PC and mobile devices.

Benefits:

- Improves indoor comfort levels
- Automates the verification of the temperature of the food cold chain
- Improve maintenance activities by sending automatic alerts
- Allows you to monitor and reduce energy consumption
- It is navigable by PCs, tablets and smartphones
- Reduces installation costs
- Enables advanced user profile management

Features:

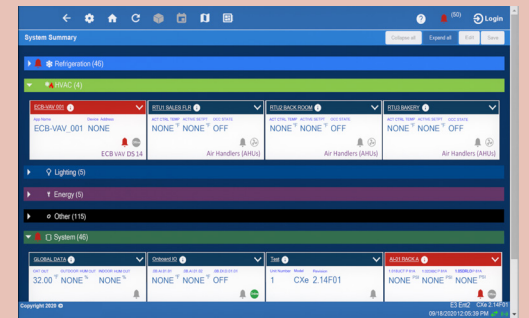

- Lights and HVAC control
- Refrigeration monitoring
- Energy analysis application
- Peak load management
- Connection via web browser
- Automatic alerts sent via email/SMS
- Data Storage
- Easy and intuitive user interface

Site Supervisor product range

The Site Supervisor family is the next generation of plant controls that combines power management with the ability to monitor the various systems in the building and generates alarms when there are issues that require attention. The Site Supervisor control module provides control of the HVAC equipment, monitoring and control of the refrigeration system, as well as lighting control.

What can Site Supervisor do for you?

Copeland Site Supervisor is a control platform and building management developed specifically for shops, restaurants and small retail spaces. It enables retailers to economically deploy enterprise-class controls for the optimization of HVAC units, refrigeration, lighting systems, and cooking facilities. When combined with Copeland services, retailers can achieve new levels of visibility and management of multiple sites, consolidating them at the enterprise level. This provides users the ability to maintain consistency store-by-store and control of maintenance activities as well as reducing the activities that are generally in charge to store personnel. Find out more about what SITE SUPERVISOR can do for you! For more information about Site Supervisor products and other benefits of Copeland control systems, please visit Copeland.com

Control module features	
Installation	DIN rail, 10 modules
Inputs	8 analog/4 digital
Outputs	4 digital
Access	Web server (local and remote)
Field bus	Modbus RS485
Power supply	24 VAC 20VA
Working temperatures	-10°C/+60°C
Approvals	UL, CE
Control capabilities	
Light controls	4 circuits
AHU controls	4 units
Demand limit controls	1 set
Energy monitoring	6 applications
Refrigeration controls	Up to 30 devices (XR75 and XC645)
